

Product Warranty Registration Portal

1. Problem Statement

Customers often lose product warranty cards and purchase bills, making it difficult to claim warranty services. They also forget the warranty expiry date and cannot easily track the warranty status. The existing manual process is time-consuming, inefficient, and increases the chances of document loss. Therefore, there is a need for a centralized digital system to manage product warranty information securely.

2. Objectives

To provide a secure platform for product warranty registration.

To store product and warranty details digitally.

To enable users to upload and manage purchase bills.

To help users track warranty status and expiry dates.

To simplify the warranty claim process through an online system.

To provide an admin panel for managing products and warranty claims.

3. Scope

The Product Warranty Registration Portal is designed for customers and administrators. Customers can register products, upload purchase bills, view warranty details, and submit warranty claims. Administrators can verify product information, manage warranty claims, and maintain user records. The system can be extended in the future by integrating email reminders, SMS notifications, and service center support.

4. Expected Outcome

A secure and user-friendly web application for warranty management.

Reduced risk of losing warranty documents.

Easy tracking of warranty validity and expiry.

Faster and more organized warranty claim process.

Improved customer convenience and efficient warranty record management.
